

Create a Prototype for Joe's Pizza Portal Using Selenium, NUnit, and SpecFlow to Develop and Test. Deploy it into Azure VM Using Jenkins

Course-end Project 1

The SCREEN SHOTS document contains:

1. create DB
2. Build an ASP.NET website comprising of the following three pages:
 - Pizza selection page –Index Page
 - Order checkout page – Cart Page
 - Order confirmation page – Checkout page
3. Nunit testing
4. Testing using Selenium
5. VM in Azure: (jenkins-get-started-vm created in Azure)
6. Jenkins
7. Deployment of ASP.NET project in Azure using app services

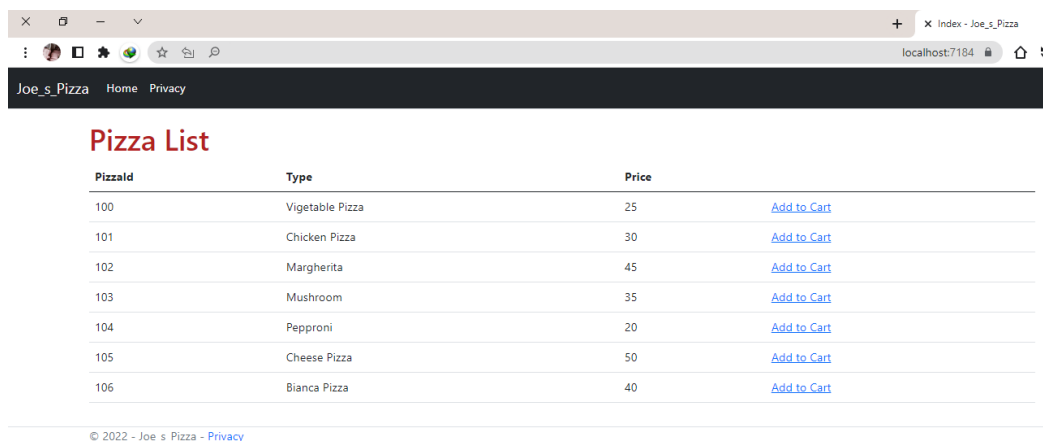

The website link: The application on azure :<https://pizzaproject.azurewebsites.net>

8. Github link:

https://github.com/bitonal/Project1_Cource4.git

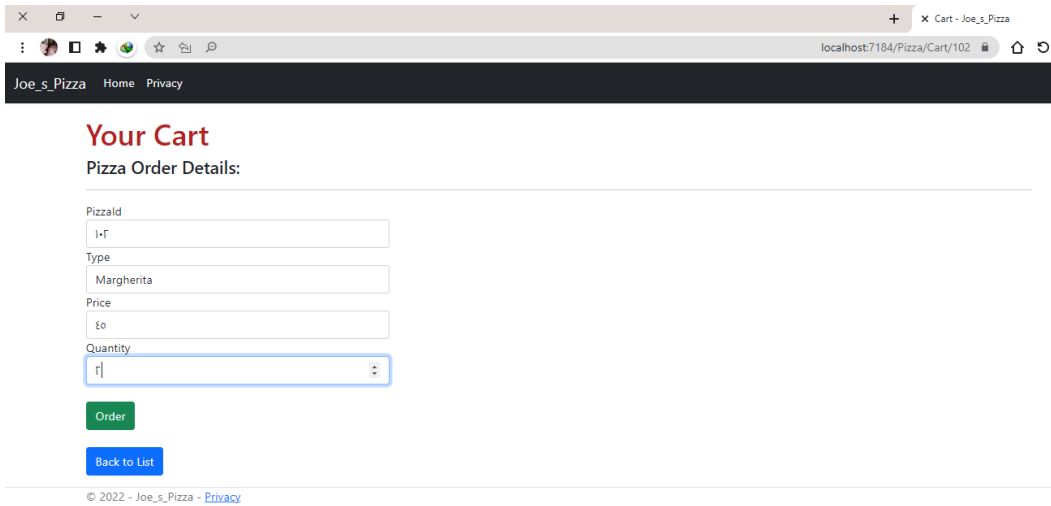

1. Build an ASP.NET website comprising of the following three pages:

- Pizza selection page –Index Page

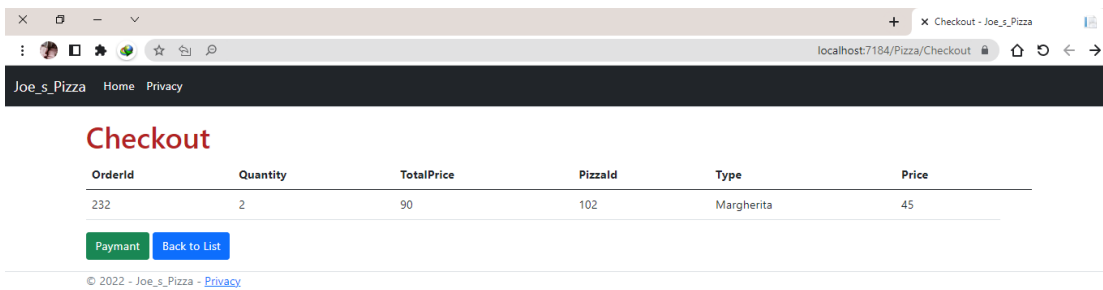

Pizzald	Type	Price
100	Vigetable Pizza	25
101	Chicken Pizza	30
102	Margherita	45
103	Mushroom	35
104	Pepproni	20
105	Cheese Pizza	50
106	Bianca Pizza	40

- Order checkout page – Cart Page

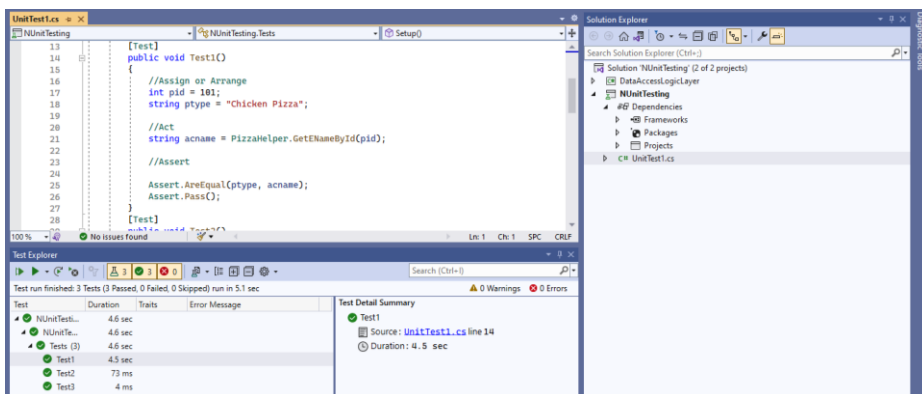

- Order confirmation page – Checkout page

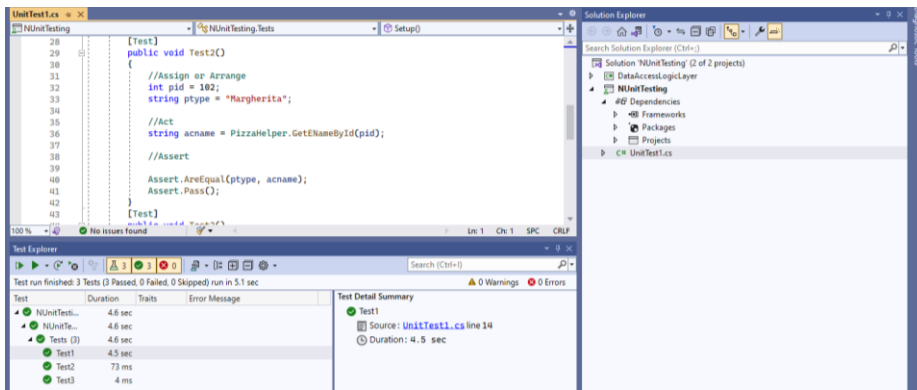

2. Nunit testing:

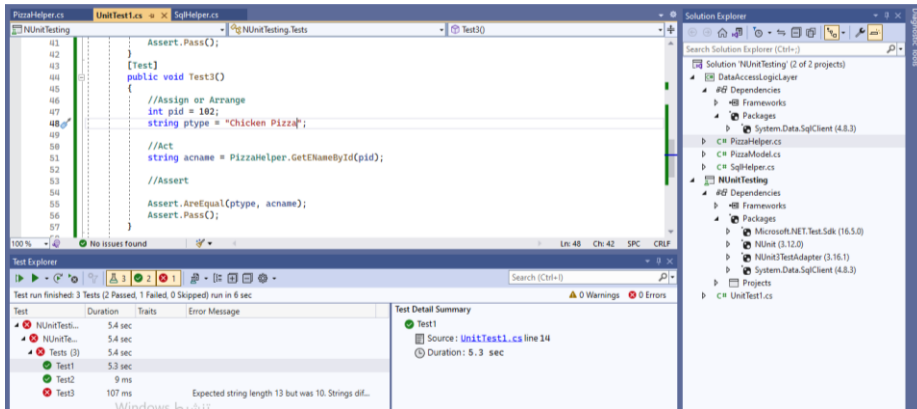

- Test unit 1

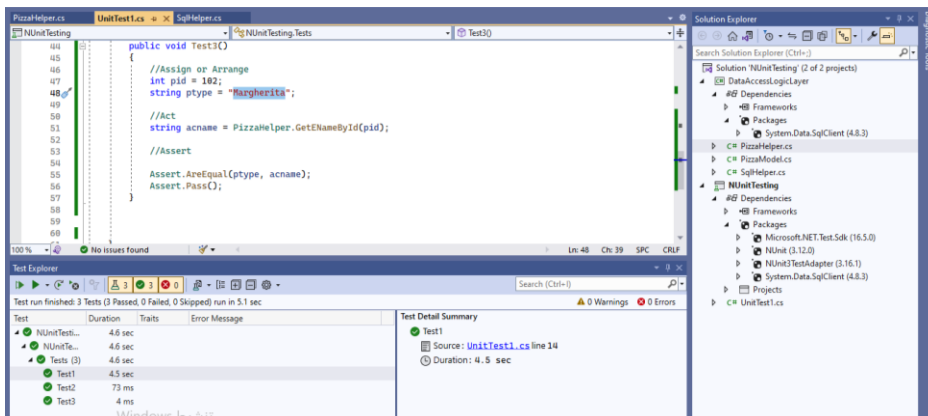

- Test unit 2

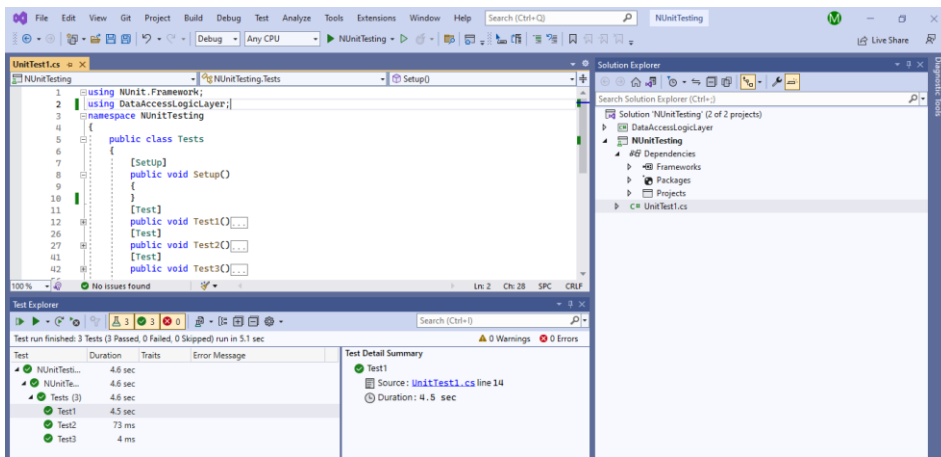

- Test unit 3: with value is false:

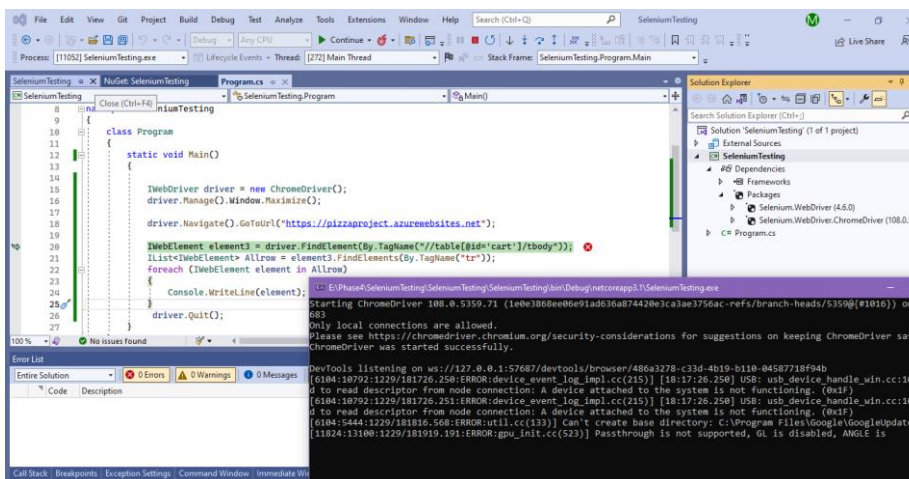

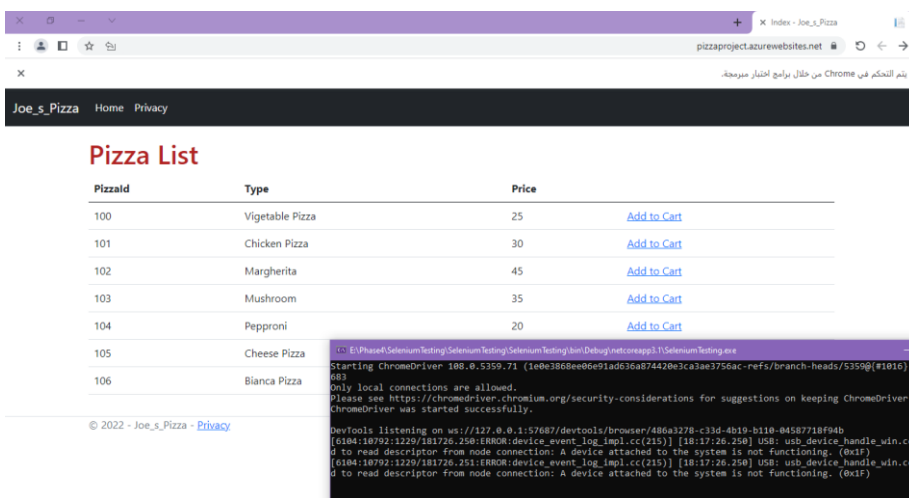

- Test unit 3: with correct value from DB

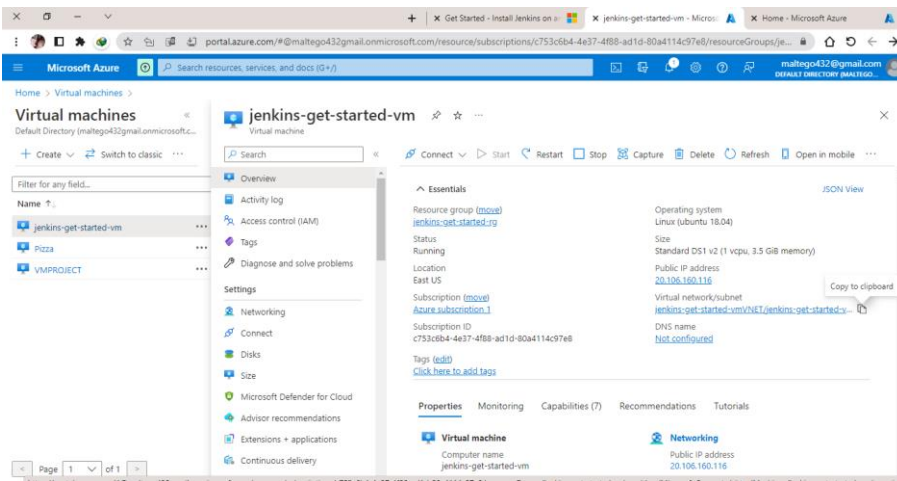

- NUnit testing all units:

3. Testing using Selenium:

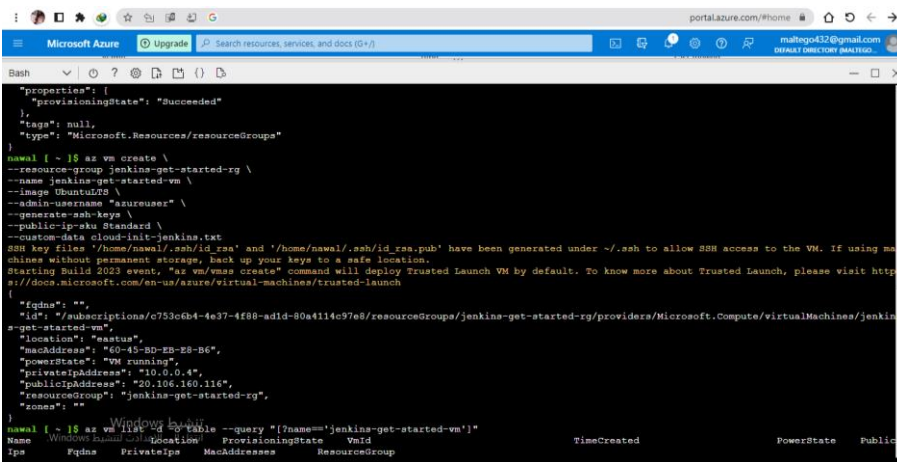

4. VM in Azure: (jenkins-get-started-vm created in Azure)

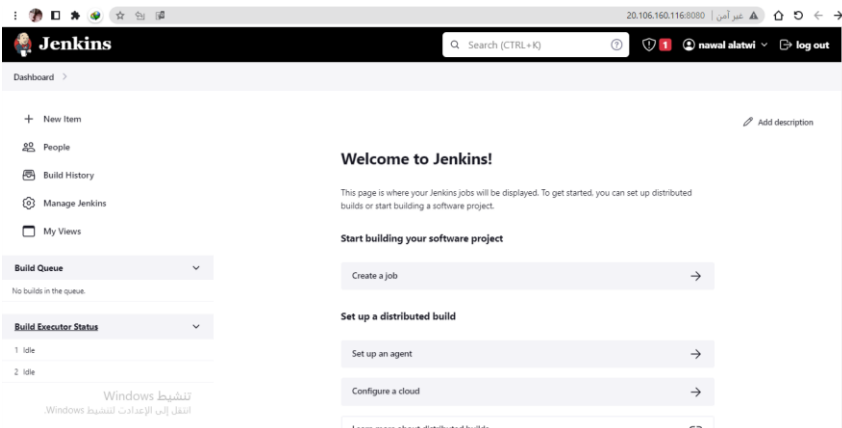

5. Jenkins:

- Jenkins connected to server

- Jenkins's dashboard!

- Testing dotnet and java version

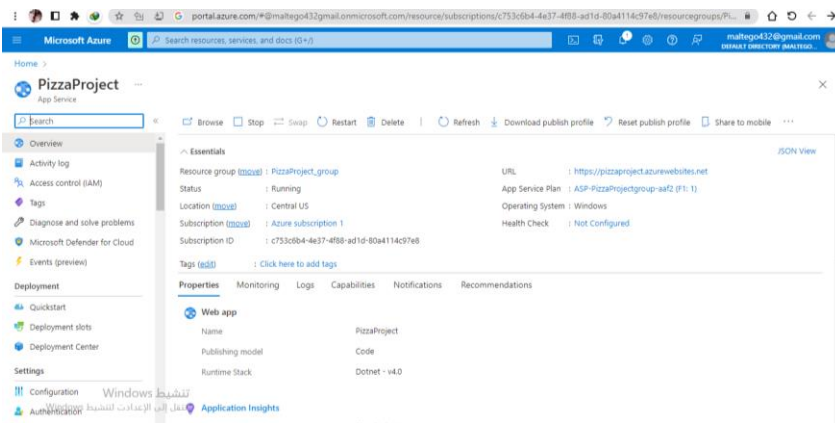

Phase 4 Project (Joe’s Pizza Site) is successfully built in Jenkins using GIT.

- Its console output!

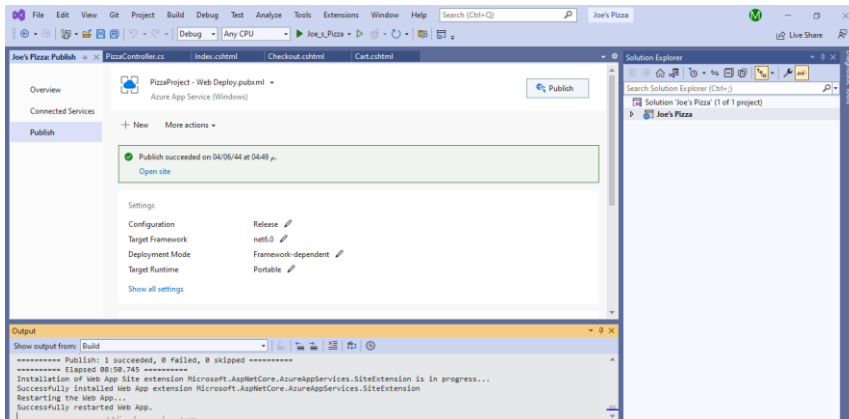

6. Deployment of ASP.NET project in Azure using app services

The application on azure :<https://pizzaproject.azurewebsites.net>

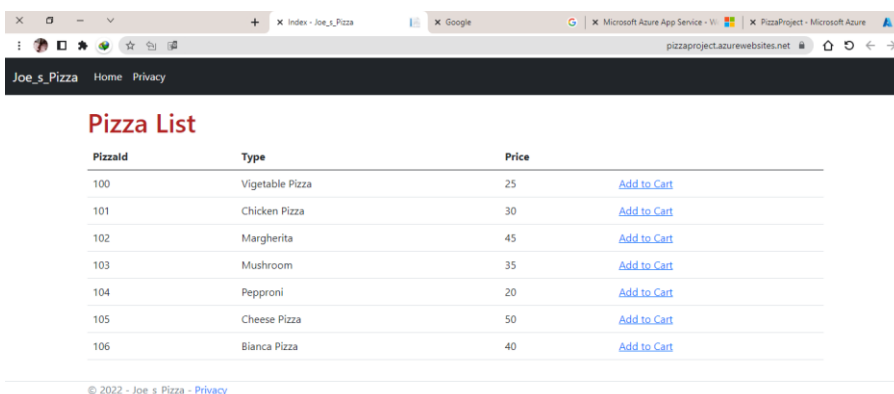

- New app service is created in Azure Cloud

- Publishing on progress...

- The Project got published successfully and its deployed on Azure!

7. The GITHUB pushing:

In the source code documents
